

Digital learning for schools and coaching classes

Better results with digital learning.

How a locked study tablet, an AI teacher and a learning system work together, so that your school teaches better, tests faster and knows the progress of every student.

Where results are lost today

Most schools work hard. The results are lost in a few everyday gaps.

Many children are behind their class level

Children in rural India who could do the sum, by class. The lighter part of each bar is the children who could not yet do it.

Source: ASER 2024 (Rural), Pratham. All schools. Survey of 649,491 children in 605 districts.

What this means

In Class 5, about 3 children in 10 could do a division sum. A child who falls behind in the basics finds every later chapter harder.

The teacher knows this, but has one period and a full class.

Four everyday gaps

Doubts stay unclear

One teacher cannot answer every student's doubt in one period. At home there is often no one to ask.

Teachers lose time in paperwork

Notes, lesson plans and question papers are made by hand, again and again.

Weak topics are found late

Paper tests take days to check. By then the class has moved to the next chapter.

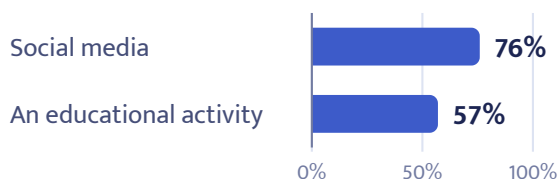

The phone distracts

Children already use phones. Study is not what they use them for most.

Phones are used more for social media than for study

Children aged 14 to 16 who can use a smartphone: what they used it for in the week before the survey.

Source: ASER 2024 (Rural), Pratham.

Almost 90% of these children have a smartphone at home. Technology is already in the life of the student.

The question for a school is not whether to use technology. It is how to make it work for study.

What a school needs from technology

Our team has worked with schools for 14 years. Technology works in a school when it is:

Simple for teachers

Quick to start. No technical skills are needed.

Safe for students

Only study opens. No social media, no games, no open internet.

Useful every day

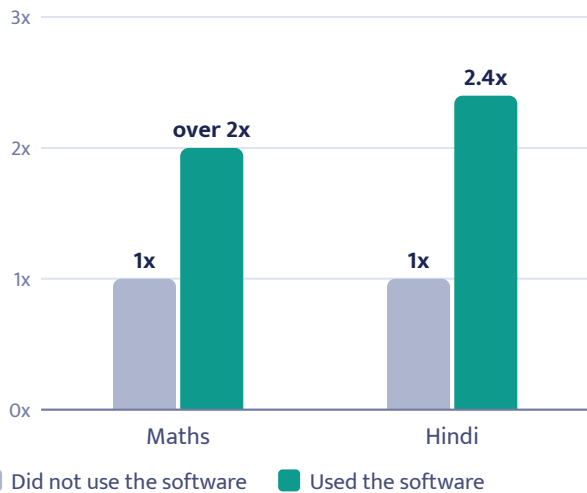

For the lesson, the doubt, the homework and the test.

What the evidence says

Technology helps when it gives each student practice at the right level, with feedback at once.

Personalised practice doubled learning progress

Progress in 4.5 months, compared with students who did not use the software (shown as 1x).

Source: Muralidharan, Singh and Ganimian, American Economic Review, 2019. A study of 619 students in Delhi, mostly in Class 6 to 9, using the Mindspark software.

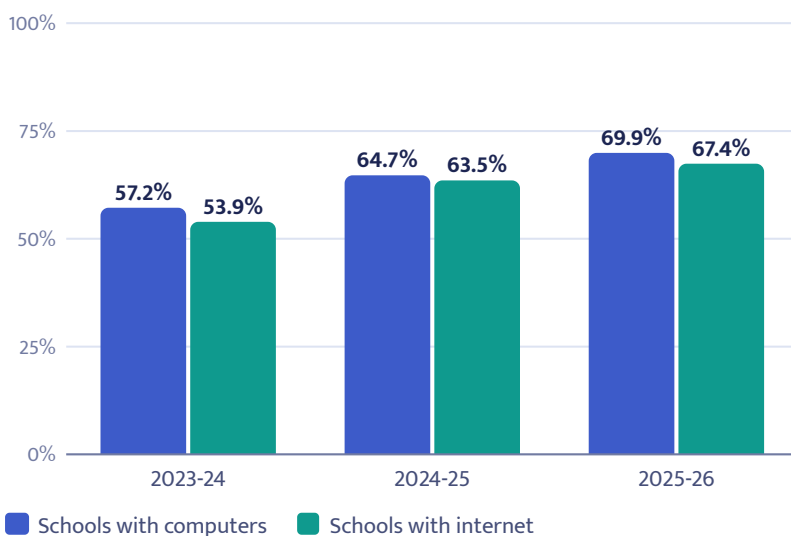

What the software did

- ✓ Each student practised at **their own level**, not the level of the whole class.
- ✓ Each answer was checked **at once**, and the next question was chosen from it.
- ✓ Weaker students gained as much as stronger students.

A fair note. This study tested a different software product, not ours. We show it because it measured, in Indian students, what daily practice with instant feedback can do. Munja AI and VidyaUpasna are built to give the same two things.

Schools in India are getting ready for digital learning

Share of schools with computers and with internet, in the last three school years.

Source: UDISE+ 2023-24, 2024-25 and 2025-26, Ministry of Education, Government of India.

About 1 school in 3 still has no internet

So study material must also work offline. EduSoulX tablets and VidyaUpasna can keep videos, books and PDFs on the device.

National Education Policy 2020

The policy asks schools to use technology in teaching, learning and assessment.

The device is not enough

A computer room helps a few periods a week. A study tablet with the right software helps every student, every day.

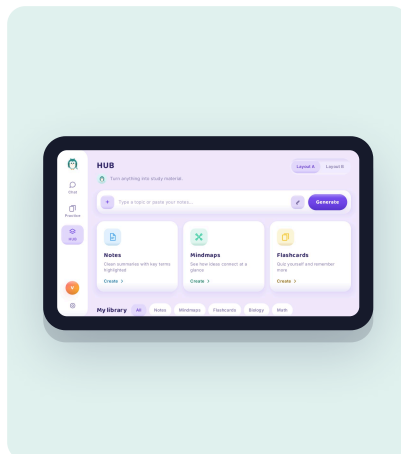

Three products that work together

The tablet is the device. Munja AI is the teacher inside it. VidyaUpasna runs the study material and the exams.

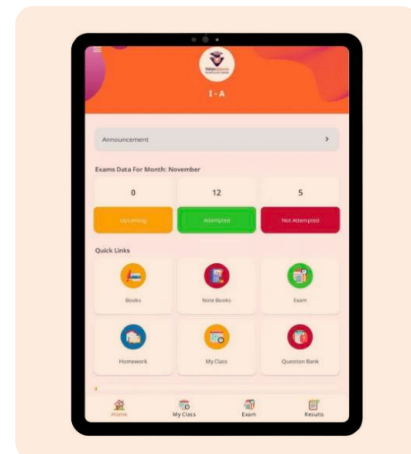

The device EduSoulX tablet

- Only for study: no WhatsApp, YouTube, Instagram or games.
- 10.1 inch HD screen, 6000 mAh battery.
- Parental lock and unlock.
- BIS certified. Made in India.

The teacher Munja AI

- Answers student doubts from the school syllabus.
- Practice, mind maps and flash cards for revision.
- Notes, lesson plans and question papers for teachers.
- Class 1 to 12, State Board and CBSE.

The system VidyaUpasna LMS

- Study material, videos and question bank in one app.
- Exams and homework with instant results.
- Live classes and doubt solving.
- Logins for teachers, students and parents.

How the three connect

What each person gains

Students

- ✓ Every doubt answered, at any time.
- ✓ Practice with the answer checked on the spot.
- ✓ No distraction during study.

Teachers

- ✓ Notes and lessons ready in minutes.
- ✓ MCQ tests checked automatically.
- ✓ More time for the class.

Management

- ✓ Everything on one screen.
- ✓ Reports in PDF or Excel.
- ✓ Less spent on printing and paper.

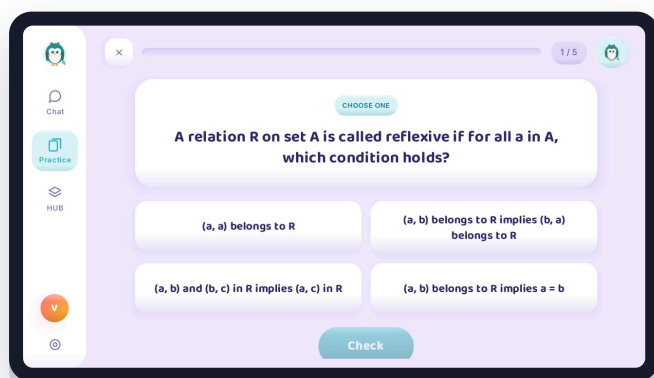

Parents

- ✓ A safe device for the child.
- ✓ Progress and attendance in the parent login.
- ✓ No games or social media.

A school day with digital learning

The same three products are used from morning to evening, by different people.

When	What happens
Before class Teacher	The teacher prepares in minutes Notes and a lesson that fits the period, made from the syllabus chapter. Munja AI
In class Teacher	Teach with a ready lesson Every card of the lesson has teaching tips. The lesson goes on the projector and the notes are shared as a PDF. Munja AI
In class Students	Study on a locked tablet Books, videos and PDFs open on the tablet. Games, social media and the open internet do not. Tablet VidyaUpasna
After class Students	Doubts are cleared the same day The student asks Munja AI and gets the answer from the syllabus. Practice questions are checked on the spot. Munja AI
Homework Students	Homework comes on the tablet Study material can be downloaded and used where there is no network. VidyaUpasna
Test day Teacher	The result comes on the spot MCQ tests are checked automatically. The teacher sees the scores topic by topic. VidyaUpasna
Exam time Students	Quick revision Mind maps and flash cards for every chapter. Help for NEET, JEE and MHT-CET too. Munja AI
Parent meeting Management	The report is ready Test scores with a topic-wise breakdown. Reports export to PDF or Excel. VidyaUpasna

Practice in Munja AI. The answer is checked when the student taps Check.

From daily effort to results

- 1 Practice every day**
On a device that has only study.
- 2 Feedback at once**
The mistake is corrected the same minute.
- 3 Weak topics seen early**
The teacher acts before the exam, not after it.

How to start in your school

Start small, see it work in your own classrooms, then grow.

1**Free demo**

We show the tablet, Munja AI and VidyaUpasna to your team, at your school.

2**Pilot batch**

One class or one batch uses it in real classroom conditions.

3**Grow class by class**

After the pilot, more classes are added, towards one tablet for each student.

4**Review each term**

We look at the usage and progress reports together with you.

What we do

- ✓ Set up the tablets, locked, with student and teacher logins.
- ✓ Deliver to your school and train your teachers there.
- ✓ Repair or replace a tablet in the warranty period.
- ✓ Support on phone and WhatsApp, and software help from remote.

What the school gives

- The list of students, with class and section.
- One teacher or staff member as coordinator.
- Wi-Fi or mobile data for the tablets.
- A room for the teacher training.

An EduSoulX tablet being shown to students in class, August 2025.

Who it is for

Schools. A study tablet for every student and an AI assistant for every teacher.

Coaching classes. Your own content, tests and live classes for NEET, JEE and MHT-CET students.

Trusts and CSR projects. Tablets ready to use from day one, with usage and progress reports for the sponsor.

An honest word. Technology does not replace the teacher. Results come when the tablets are used every day, and the reports show you that use.

See all three working in your school

The demo is free. The price depends on the number of students and the products you choose, and comes in a written quote.
